

Streamlining Medicare CDMP Revenue

Medicare-Ready. Results-Focused.

Sensacare is purpose-built to support clinics, GPs, and allied health professionals in delivering better care while fully leveraging the Medicare Benefits Schedule (MBS). Unlike basic vitals trackers, our platform aligns directly with key CDMP item numbers — 721, 732, and 723 — streamlining care plan creation, reviews, and team-based interventions.

Auto-Generated CDMP Reports

Export compliant, easy-to-read summaries of vitals and goal progress ready for MBS audit and upload.

Nurse-Led Triage

Real-time monitoring and alerts reviewed by our clinical nursing team help satisfy review conditions (Item 732).

Goal Tracking & Outcome Monitoring

Track individual patient goals like BP, HR, weight, and blood glucose. Trigger alerts when targets drift to support early intervention and review eligibility.

MBS Documentation Automation

Sensacare reduces the admin burden by pre-filling required fields for review templates, plan updates, and care team notes, aligned to CDMP workflows.

Why It Matters

Delivering value-based care doesn't need to increase workload. With Sensacare, you can:

- Automate reporting for Item 721 care plans
- Justify and streamline Item 732 reviews
- Support team collaboration for Item 723 billing
- Flag deterioration to support proactive interventions
- Drive repeatable, auditable revenue through compliant tracking
