

Your Intelligent CDMP Solution

Everything you need to know about how to use Sensacare to streamline and strengthen your Chronic Disease Management Plans (CDMPs).

A Comprehensive CDMP System

Sensacare is not just a vitals tracking tool, it's a comprehensive CDMP support system that aligns directly with MBS item numbers 721, 732, and 723.

Less admin: Replace manual CDMP updates with automated reports

Higher compliance: Stay audit-ready with clear, exportable documentation

Better outcomes: Early warnings prevent escalations
Increased revenue: Support for more frequent, billable CDMP reviews

Happier patients: Clients feel safer and more engaged with their care plan

Medicare Alignment: How Each Item Is Supported

MBS Item	Purpose	How Sensacare Helps
721	Creation of GP Management Plan (GPMP)	Sensacare provides baseline vitals, sets goals, and captures initial data for care plan setup.
732	Review of GP Management Plan (GPMP)	Real-time vitals and trends make it easy to justify a review, with exportable reports to attach to your claim.
723	Team Care Arrangements (TCA)	Secure access can be shared with allied health for team-based care, and notes can be integrated for continuity.

Tools & Features That Save Time and Improve Care

Generate and export CDMP-friendly summaries of vitals, goal progress, and alerts. No more manual data entry.

Set condition-specific goals (e.g. BP under 130/80) and let Sensacare track trends automatically. Visual cues highlight progress or deterioration.

If a patient's vitals deviate from safe ranges, you're alerted immediately helping prevent hospitalisations and enabling early action.

All data handling complies with HIPAA (US) and Australian Privacy Principles. Audit trails and access control are built in.
